**EAR INFECTION
AFTERCARE INSTRUCTIONS**

1. Your pet has been diagnosed with an ear infection. The first treatment has already been done.
2. Clean the affected ears as shown during the examination twice per day for 7 days.
3. Apply 7 or 10 drops of Tresaderm to the affected ears following each cleaning.
4. After the 7-day cleaning, clean both ears in the same manner once per week for life to minimize the chance of future ear infections occurring.
5. Return immediately if the condition worsens or in 6 weeks for a re-evaluation to ensure the infection has been resolved. Do not clean the ears for 7 days prior to the re-evaluation.
6. Keep the Tresaderm refrigerated.
